MEDIUM

IMAGES Remediation priority 93/100 MEDIUM MODERATE effort 100% confidence

Images are missing alt text

One or more images have no usable alt text.

14 of 14 audited pages (100%) · 19 affected images

Pattern: Site-wide pattern

Impact: Missing alternative text reduces accessibility and limits the context available to image search systems.

Recommended action: Add descriptive alt text to meaningful images and use an empty alt attribute for purely decorative images.

Probable cause: The missing alternative text is likely originating from a shared image component, CMS media field or publishing workflow that does not require alt text. Review reusable image rendering, editorial validation and CMS defaults with Content / Frontend engineering.

Implementation owner: Content / Frontend engineering

Validation: Inspect every affected image and confirm that its alt treatment matches its purpose in the page.

Pattern intelligence: The finding affects at least 90% of audited pages, which strongly suggests a shared layout, component, policy or content source.

Affected pages: <https://synergix.app/> · <https://synergix.app/company.html> · <https://synergix.app/contact.html> · <https://synergix.app/cookies> · <https://synergix.app/cookies.html> · <https://synergix.app/imprint.html> · <https://synergix.app/privacy> · <https://synergix.app/privacy.html> · +6 more

2

MEDIUM

SECURITY Remediation priority 86/100 HIGH SIGNIFICANT effort 100% confidence

Content-Security-Policy is missing

The response does not provide a Content-Security-Policy header.

14 of 14 audited pages (100%) · 14 recorded instances

Pattern: Site-wide pattern

Impact: Without a Content Security Policy, the site has fewer browser-level protections against injected content.

Recommended action: Design and deploy a tested Content Security Policy, beginning in report-only mode where appropriate.

Probable cause: Likely shared implementation or governance issue. Review the global layout, reusable components, CMS defaults and deployment configuration with Platform / Security engineering.

Implementation owner: Platform / Security engineering

Validation: Inspect response headers and verify that the policy permits required resources while blocking unauthorized sources.

Pattern intelligence: The finding affects at least 90% of audited pages, which strongly suggests a shared layout, component, policy or content source.

Affected pages: <https://synergix.app/> · <https://synergix.app/company.html> · <https://synergix.app/contact.html> · <https://synergix.app/cookies> · <https://synergix.app/cookies.html> · <https://synergix.app/imprint.html> · <https://synergix.app/privacy> · <https://synergix.app/privacy.html> · +6 more

3

MEDIUM

SEO Remediation priority 71/100 MEDIUM MODERATE effort 100% confidence

Duplicate page title

The same title is used by multiple crawled pages.

8 of 14 audited pages (57%) · 8 recorded instances

Pattern: Repeated multi-page issue

Impact: Duplicate titles make pages harder to distinguish and can weaken search relevance signals.

Recommended action: Create a unique title for each affected page based on its specific purpose and content.

Probable cause: Likely repeated across multiple components or publishing workflows. Compare affected pages to locate the common implementation with SEO / Content.

Implementation owner: SEO / Content

Validation: Recrawl the site and confirm that affected pages no longer share the same normalized title.

Pattern intelligence: The finding occurs on multiple pages without a dominant route family. Review shared components, CMS fields and repeated publishing practices.

Affected pages: <https://synergix.app/cookies> · <https://synergix.app/cookies.html> · <https://synergix.app/privacy> · <https://synergix.app/privacy.html> · <https://synergix.app/refund-policy> · <https://synergix.app/refund-policy.html> · <https://synergix.app/terms> · <https://synergix.app/terms.html>

4

MEDIUM

CRAWLABILITY Remediation priority 63/100 MEDIUM QUICK effort 100% confidence

Canonical URL mismatch

The declared canonical points to a different URL.

4 of 14 audited pages (29%) · 4 recorded instances

Pattern: Repeated multi-page issue

Impact: A canonical pointing elsewhere may cause the current page to be excluded or consolidated unexpectedly.

Recommended action: Confirm whether the alternate canonical is intentional; otherwise point it to the correct preferred URL.

Probable cause: Likely repeated across multiple components or publishing workflows. Compare affected pages to locate the common implementation with Web platform engineering.

Implementation owner: Web platform engineering

Validation: Verify that the canonical target is accessible, indexable and aligned with the intended page strategy.

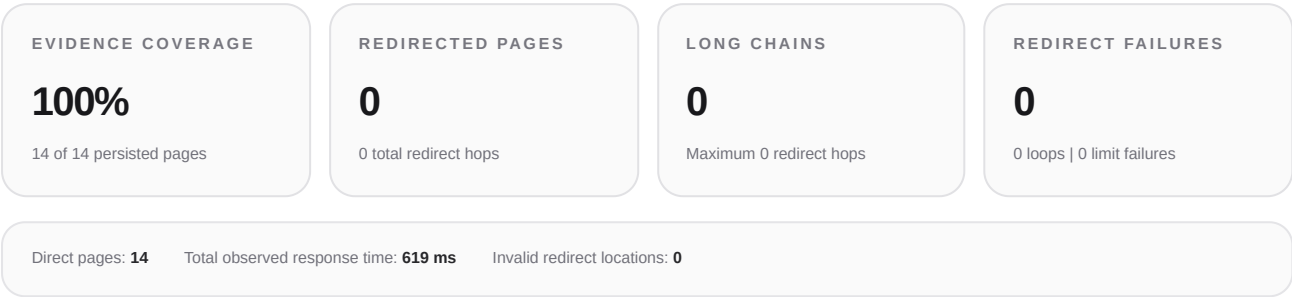

Pattern intelligence: The finding occurs on multiple pages without a dominant route family. Review shared components, CMS fields and repeated publishing practices.

Affected pages: <https://synergix.app/cookies.html> · <https://synergix.app/privacy.html> · <https://synergix.app/refund-policy.html> · <https://synergix.app/terms.html>

REDIRECT INTELLIGENCE

HTTP response paths and redirect risk

SiteOptima preserves every observed HTTP response in redirect paths, including intermediate destinations, retries, timings and terminal outcomes.

REDIRECT EVIDENCE

Observed HTTP redirect paths

No redirected or failed HTTP paths were detected in the persisted evidence.

Internal links pointing to redirected destinations

Identify the source pages and original linked URLs that should point directly to their final destination.

Redirect destinations	Link occurrences	Affected source pages	Chain evidence coverage

HREFLANG INTELLIGENCE

Alternate-language relationships and target health

This section validates persisted language and region declarations, reciprocal relationships, self references, target responses, indexability and canonical compatibility. SiteOptima does not infer language or market targeting from URL structure.

REVIEW RELATIONSHIPS

0

0 relationships have no review signal.

RELATIONSHIP CLUSTERS

0

0 pages declare alternates.

RECIPROCAL GAPS

0

0 pages miss a self reference.

TARGET CONFLICTS

0

Missing, redirected, failed, noindex or canonicalized targets.

RELATIONSHIP CLUSTERS

Language, region and x-default groups

No alternate-language clusters were declared.
Complete evidence is available for the single-language controls.

DECLARATION EVIDENCE

Source-to-target relationships and operational guidance

No hreflang declarations require relationship evaluation.

STRUCTURED DATA INTELLIGENCE

Schema declarations, entity identity and reference health

This section evaluates explicit persisted JSON-LD, Microdata and RDFa syntax, stable entity IDs, profile completeness, page alignment and referenced crawl targets. It does not infer markup, does not execute scripts and does not claim search-engine rich-result eligibility.

References without a matching persisted crawl target are labeled No persisted crawl target.

REMEDIATION TRIAGE

Technical remediation queue

Complete crawl evidence. Technical priority is not P0–P3 business priority. Implementation owner is a hint, not an assignment. Assignment, business priority, workflow state and SLA remain NOT_PERSISTED.

ACTION CANDIDATES

3

Catalogue guidance indicates technical action.

REVIEW CANDIDATES

1

Intent should be confirmed before remediation.

CRITICAL + HIGH

0

Technical severity only; not business-impact evidence.

NEEDS ASSIGNMENT

4

No durable assignee, business priority, workflow state or SLA yet.

Images are missing alt text

images.alt.missing

93/100

Not business P0–P3

SCOPE

14 of 14 audited pages (100%) ·
19 affected images

PATTERN

Site-wide pattern · 95%
confidence

OWNER HINT

Content / Frontend engineering
Guidance only · not assigned

PROBABLE CAUSE

The missing alternative text is likely originating from a shared image component, CMS media field or publishing workflow that does not require alt text. Review reusable image rendering, editorial validation and CMS defaults with Content / Frontend engineering.

TECHNICAL IMPACT

Missing alternative text reduces accessibility and limits the context available to image search systems.

RECOMMENDED ACTION

Add descriptive alt text to meaningful images and use an empty alt attribute for purely decorative images.

EXACT VALIDATION

Inspect every affected image and confirm that its alt treatment matches its purpose in the page.

OPERATIONAL STATUS

Assignment NOT_PERSISTED · Business priority NOT_PERSISTED · Workflow NOT_PERSISTED · SLA NOT_PERSISTED

Content-Security-Policy is missing

security.csp.missing

86/100

Not business P0–P3

SCOPE

14 of 14 audited pages (100%) ·
14 recorded instances

PATTERN

Site-wide pattern · 95%
confidence

OWNER HINT

Platform / Security engineering
Guidance only · not assigned

PROBABLE CAUSE

Likely shared implementation or governance issue.
Review the global layout, reusable components,
CMS defaults and deployment configuration with
Platform / Security engineering.

TECHNICAL IMPACT

Without a Content Security Policy, the site has fewer
browser-level protections against injected content.

RECOMMENDED ACTION

Design and deploy a tested Content Security Policy,
beginning in report-only mode where appropriate.

EXACT VALIDATION

Inspect response headers and verify that the policy
permits required resources while blocking
unauthorized sources.

OPERATIONAL STATUS

Assignment NOT_PERSISTED · Business priority NOT_PERSISTED · Workflow NOT_PERSISTED · SLA
NOT_PERSISTED

Duplicate page title

seo.title.duplicate

71/100

Not business P0–P3

SCOPE

8 of 14 audited pages (57%) · 8 recorded instances

PATTERN

Repeated multi-page issue · 75% confidence

OWNER HINT

SEO / Content
Guidance only · not assigned

PROBABLE CAUSE

Likely repeated across multiple components or publishing workflows. Compare affected pages to locate the common implementation with SEO / Content.

TECHNICAL IMPACT

Duplicate titles make pages harder to distinguish and can weaken search relevance signals.

RECOMMENDED ACTION

Create a unique title for each affected page based on its specific purpose and content.

EXACT VALIDATION

Recrawl the site and confirm that affected pages no longer share the same normalized title.

OPERATIONAL STATUS

Assignment NOT_PERSISTED · Business priority NOT_PERSISTED · Workflow NOT_PERSISTED · SLA NOT_PERSISTED

Canonical URL mismatch

crawl.canonical.mismatch

63/100

Not business P0–P3

SCOPE

4 of 14 audited pages (29%) · 4 recorded instances

PATTERN

Repeated multi-page issue · 75% confidence

OWNER HINT

Web platform engineering
Guidance only · not assigned

PROBABLE CAUSE

Likely repeated across multiple components or publishing workflows. Compare affected pages to locate the common implementation with Web platform engineering.

TECHNICAL IMPACT

A canonical pointing elsewhere may cause the current page to be excluded or consolidated unexpectedly.

RECOMMENDED ACTION

Confirm whether the alternate canonical is intentional; otherwise point it to the correct preferred URL.

EXACT VALIDATION

Verify that the canonical target is accessible, indexable and aligned with the intended page strategy.

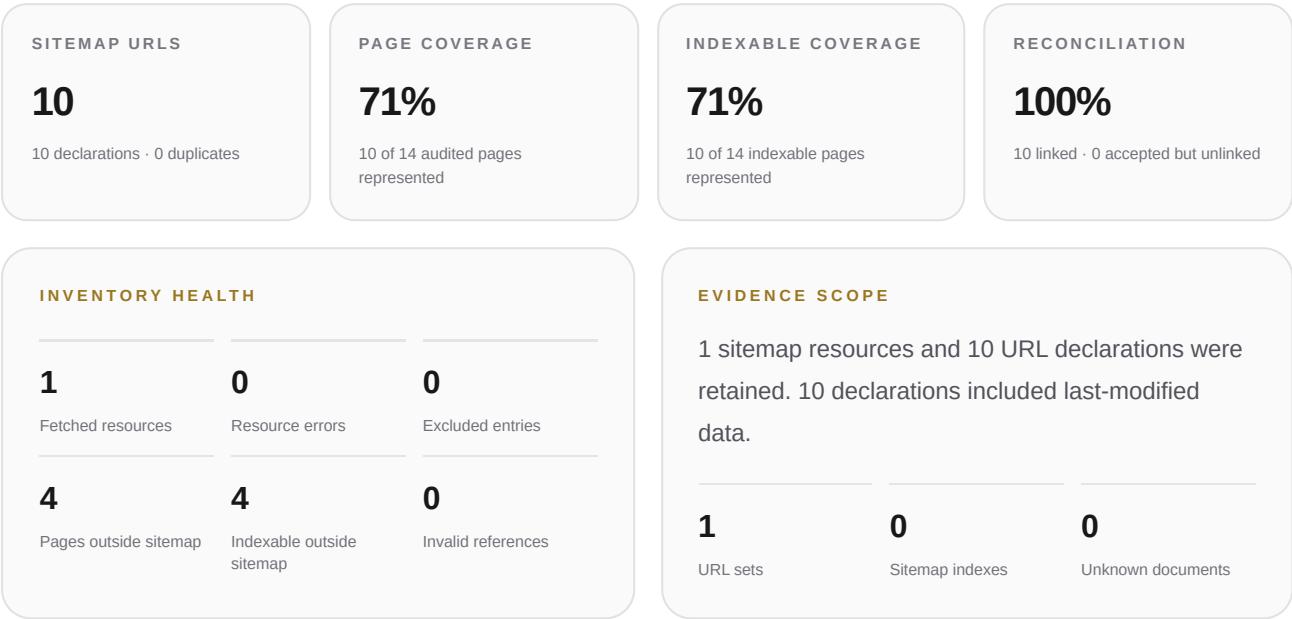

OPERATIONAL STATUS

Assignment NOT_PERSISTED · Business priority NOT_PERSISTED · Workflow NOT_PERSISTED · SLA NOT_PERSISTED

RECOMMENDED NEXT STEP

Address the highest-value issue type first

Start with “Images are missing alt text”, currently ranked 93/100 for remediation value. Resolve the shared source where possible, validate affected pages and rerun the audit to confirm improvement.

METHODOLOGY

Evidence-backed technical analysis

SiteOptima evaluated HTTP behavior, indexability, metadata, content, links and images and attached findings to persisted page-level evidence.
